

COALBROOK

ROUND MIRROR INSTALLATION

---

8100 | 8101

## IMPORTANT INFORMATION

### Professional installation

We recommend that our products are installed by a fully qualified professional. A tester should be used to ensure there are no hidden pipes or electrical cables where the product is to be mounted.

One person should be sufficient to lift the mirror. If for any reason this weight is considered too heavy, then obtain assistance.

- When lifting, always keep your back straight. Bend your legs, not your back.
- Avoid twisting at the waist. It is better to reposition your feet.
- Avoid bending your upper body. Do not lean forward or sideways while handling the mirror.
- Always grip with the palm of the hand. Do not use the tips of fingers for support.
- Always keep the mirror as close to the body as possible. This will minimise the cantilever action.
- Use gloves to provide additional grip.
- Always use assistance if required.

The product's front is made of glass. Take care during handling and installation to prevent personal injury or damage. If the glass is damaged while in use, the mirror, lights, and demister setting must not be used. Isolate the electrical supply and arrange for immediate replacement or repair.

The mounting surface must be dry and of suitable construction to support the mirror's weight.

### Wall fixings

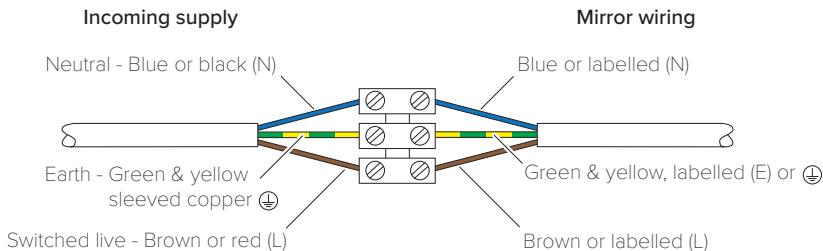

The screws and wall plugs provided are suitable for most brick walls. However, if the wall is constructed of plasterboard or soft building block, the appropriate fixings should be used.

### Isolating the electrical supply

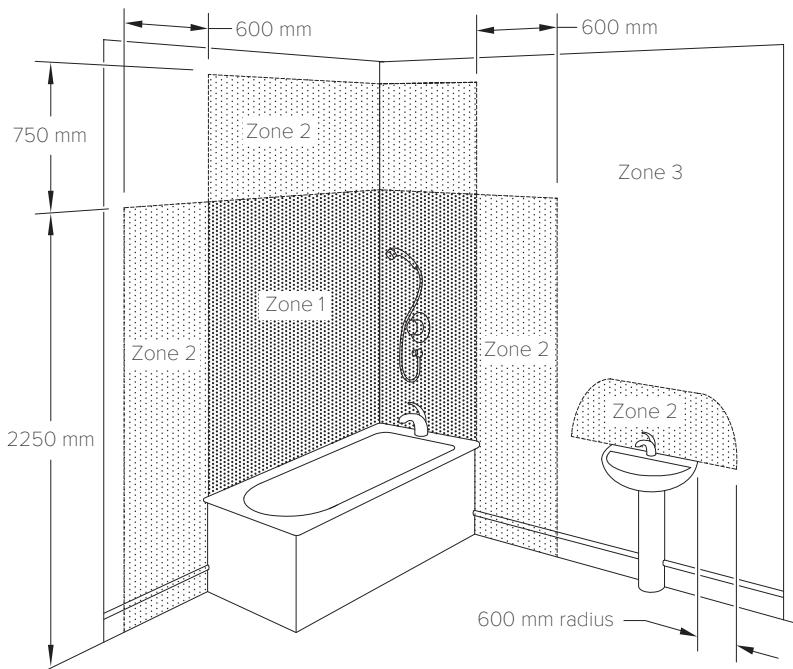

Switch off your power supply at the fuse box (consumer unit). This can be achieved in two ways. The first is to turn off the miniature circuit breaker (MCB) for the circuit and place RED insulating tape over the MCB to prevent it being accidentally turned on. The second is to turn off the main switch, remove the circuit fuse and turn the main switch on again to restore power to the rest of the house.

### Making connections

The connection cable is fitted with an electrical connector box. After making connections, ensure that the connector box is closed.

## LOCATION

The mirrors are IP44 rated. They can be installed in bathroom zones 2 and 3, and in kitchens where steam is present.

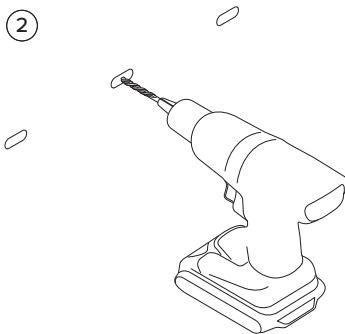

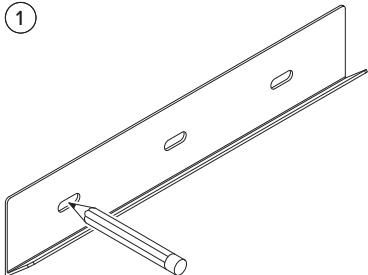

## PRODUCT CARE

Wipe clean with a soft damp cloth. Never use abrasive or chemical cleaners, as these could damage the finish.

## WALL SUPPORT INSTALLATION

Shown with 3 hole bracket from 8100 model.

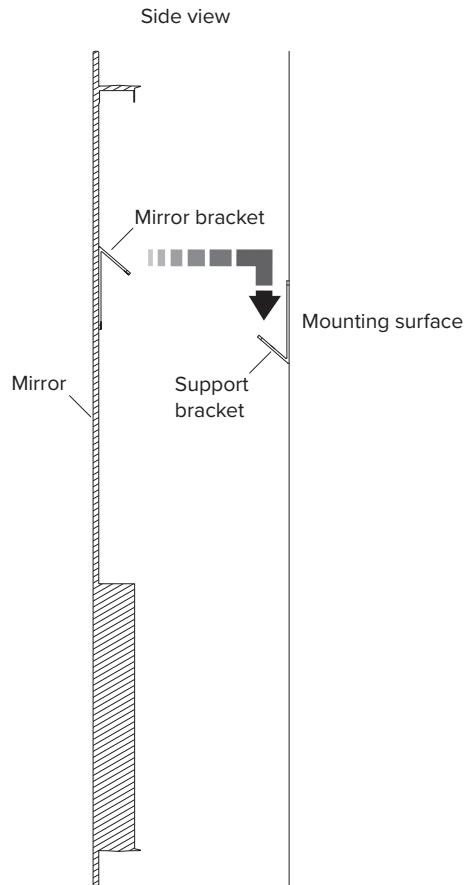

1. The support bracket may be attached with tape to the bracket at the rear of the mirror. Detach the support bracket and position it on the mounting surface, using a spirit level to ensure that it is level. Mark the locations of all the fixing slots.
2. Remove the support bracket and drill holes using a suitable drill bit.
3. Insert the wall fixings, then screw the support bracket in place.

## MIRROR INSTALLATION

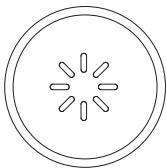

1. Make the electrical connections.
2. Offer the mirror bracket onto the support bracket. Do not drag the mirror on the wall surface, as this may cause damage.
3. Check the operation of the lights and demister system.

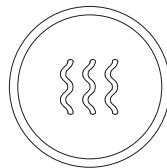

## OPERATION

LIGHT  
ON/OFF

LIGHT  
COLOUR SELECTOR

DEMISTER

### Active or inactive?

A vivid white symbol is active, a dull white symbol is inactive.

### How to operate the mirror light

There are two symbols used to control the light. Touching the ON/OFF symbol activates the light and COLOUR SELECTOR at the same time. The colour selector will only operate with the ON/OFF symbol active. There are three light colours available, bright, cool and warm. Touching the colour selector repeatedly, cycles through the three colours.

### Fine colour adjustment

First select the 'bright' light setting, then TOUCH and HOLD the colour selector symbol. The colour will change gradually. Release the symbol when the desired colour is achieved. At the end of the cycle the colour selector symbol will flash, indicating that no more colour options are available. Repeat the process if the desired colour was not achieved.

The mirror will remember the last chosen colour and will use this colour whenever the light is switched on.

### Brightness adjustment

With the light on, TOUCH and HOLD the ON/OFF symbol. The brightness will either increase or decrease. Release the symbol when the desired brightness is achieved. At the end of the cycle the ON/OFF symbol will flash, indicating that no more brightness options are available. Repeat this process if the desired brightness was not achieved. The first operation increases the brightness, the second decreases the brightness.

The mirror will remember the last chosen brightness setting and will use this whenever the light is switched on.

### How to operate the demister

The demister can be used with the light on or off. To switch the demister on or off, touch the DEMISTER symbol.

The demister works by warming the glass in a localised area. For convenience we recommend switching the demister on before taking a bath or shower. This will ensure that the mirror is ready for use. Remember to always turn the demister off after use.

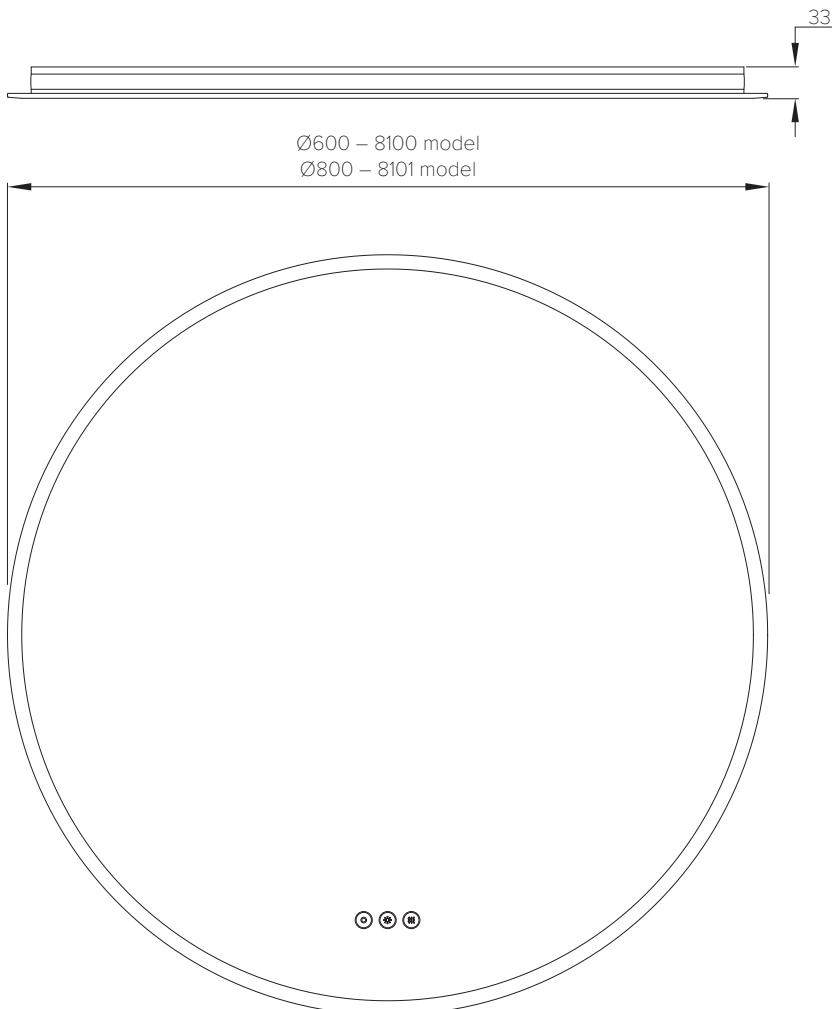

### Standby mode

If required, the light and/or demister can be put into standby mode. To do this the symbols must be inactive (dull white). TOUCH and HOLD the symbols to switch them off (grey colour). Touch the ON/OFF or DEMISTER symbols to reactivate.
